Making Professional Offices More Responsive

Background

Doctor's offices and medical professional buildings present a range of styles, from spartan arrangements to luxurious establishments. At their heart they consist of patient waiting areas, examination rooms, and staff offices.

Challenge

Each space requires different light levels for different tasks — especially with virtual appointments becoming more prevalent. Lighting should assist in putting patients at ease, as well as making it easy for medical staff to do their jobs.

Opportunity

Give the medical professionals the right light, at the right time, for the right activity, with a simple press of a button — or automatically, thanks to programmed, touchless controls — to instantly change the space to adapt to what they need to accomplish.

LUTRON

The Solution

Vive by Lutron is a simple, flexible, scalable lighting control solution, built on a proven wireless platform, for new and existing buildings. **lutron.com/vive**

Why Vive — Work Smarter, Not Harder

Save time.
Quick installation time — 70% faster than wired control solutions — means shorter timelines and lower costs. Controls install quickly, and you can do them overnight, one room at a time, with no rewiring necessary.

Meet code. Meet your needs.
Vive has simple, code-compliant solutions for any professional space. Put the right controls in the appropriate place, and connect them all with just one system.

Proven technology — it just works.
Millions of wireless systems have been installed in offices and facilities around the world, backed by industry-leading quality.

Solve problems. Adjust effortlessly.
Simple software, available on your phone, allows you to re-program or adjust settings from anywhere. And Vive evolves with you, allowing you to make changes in your wireless setup without rewiring — helping you adapt to changing guidelines and in creating an automated, touchless environment.

Easy to grow. Simple to manage.
With Vive, you can start with one area and add other spaces over time, without any rewiring required. With the Vive app, facilities teams can make changes to lighting, see alerts on low battery warnings, and modify their spaces without calls to the manufacturer.
