Simple, scalable, wireless
lighting control

Wireless Load Controls

Wireless Sensors

Wall Controls

Personal Control

Optional Facilities Software

Bank solution
Creating a More Comfortable, Attentive Space

Background

Bank atriums are multifunctional spaces that support a comfortable work environment for employees and offer a welcoming environment for customers.

Challenge

Bank atrium environments can be enhanced by creating unique lighting zones for different activities, such as waiting areas for customers or private tables for one-on-one meetings. Lighting controls can create the right environment for all parties.

Opportunity

Utilize energy-saving lighting control strategies to enhance the quality of light and reduce cost while creating the right environment for both employees and visitors.

LUTRON

The Solution

Vive by Lutron is a simple, flexible, scalable lighting control solution, built on a proven wireless platform, for new and existing buildings. **lutron.com/vive**

Why Vive — Work Smarter, Not Harder

Save time.
Quick installation time – 70% faster than wired control solutions – means shorter timelines and lower costs. Controls install quickly, and you can do them overnight, one room at a time, with no rewiring necessary.

Meet code. Meet your needs.
Vive has simple, code-compliant solutions for any space in your building. Put the right controls in the appropriate place, and connect them all with just one system.

Proven technology – it just works.
Millions of wireless systems have been installed in banks, offices, and customer-facing workplaces around the world, backed by industry-leading quality.

Solve problems. Adjust effortlessly.
Simple software, available on your phone, allows you to re-program or adjust settings from anywhere. And Vive evolves with you, allowing you to make changes in your wireless setup without rewiring.

Easy to grow. Simple to manage.
With Vive, you can start with one area and add other spaces over time, without any rewiring required. With the Vive app, facilities teams can make changes to lighting, see alerts on low battery warnings, and modify their spaces without calls to the manufacturer.
